

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

Date	26 October 2022
Team ID	PNT2022TMID15139
Project Name	Smart Farmer- IoT Enabled Smart Farming Application
Maximum Marks	4 Marks

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	<ul style="list-style-type: none"><li>Registration through MIT App or other user interface applications which are being prescribed.</li></ul>
FR-2	User Control	<ul style="list-style-type: none"><li>Control through device through MIT app or other user interface.</li></ul>
FR-3	Physical parameters	<ul style="list-style-type: none"><li>Soil Moisture, Humidity and physically varying environmental factors.</li></ul>
FR-4	Internet Connectivity	<ul style="list-style-type: none"><li>Allocating a separate spectrum of low band wifi modules to ensure sustainable connectivity.</li><li>Checking the internet connection periodically.</li><li>Speed of the internet.</li></ul>
FR-5	Monitoring	<ul style="list-style-type: none"><li>Displaying the values of soil moisture, temperature, humidity and other physical parameters.</li></ul>
FR-6	Output	<ul style="list-style-type: none"><li>Checking the output at the farmland conditions.</li></ul>

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	It is used in agricultural activities to scale up the productivity with optimal usage of resources.
NFR-2	<b>Security</b>	It will be able to monitor farmland conditions at any time in any geographical locations.
NFR-3	<b>Reliability</b>	It is reliable in all the environmental conditions.
NFR-4	<b>Performance</b>	It will perform accurately and give results according to the user handling of device.
NFR-5	<b>Availability</b>	It is applicable to all geographical locations and user friendly to handle.
NFR-6	<b>Scalability</b>	This model able to detect adaptively according to the environmental conditions by the use of sensors and change the output and is adaptive to every farmland characteristics.
